

SI paint

***contributes to substantially
reduce costs for :***

- (a) Coating Inspection***
- (b) Physical thickness
measurement & Marking***
- (c) Repair & Touch-up painting***
- (d) Total Painting***
- (e) Ship Construction***

Nippon Paint Marine Coatings offer SI technology to rationalize and reduce total painting costs and to secure reliable and solid coating.

We are the advocate to change painting with SI technology.

Have you ever seen or
heard of coating Color
that shows thickness
and coating thickness
that shows Color ?

“Yes !”
Why not take advantage of
SI technology ?

SI paint will contribute ;

- (1) to reduce man-hours for inspection and painting,**
- (2) to reduce vessel construction period, construction costs,**
- (3) to increase or at least not to decrease yard throughput,**
- (4) to increase asset value and thereby residual value of vessels free from corrosion in water ballast & void spaces**

--- Benefits and competitive edges for shipowners and shipbuilders

**Nippon Paint Marine Coatings
propose SI painting to marine
coating industry.**

**We do hope SI paint to be
disseminated quickly
worldwide in the wake of
PSPC of IMO.**

Thank you !
